GÜNTER KUNSTSTOFFMASCHINEN GMBH

MAIN FEATURE:

INTERPACK 2014

At the very beginning, packaging consisted of plain containers or simple wrappings, such as paper, to store, protect or transport goods and merchandise. Today, there are entire industry branches that concern themselves with the packaging of very large to extremely small parts or things that people around the world need on a daily basis. Every three years, state of the art technology as well as progress in the science and research sectors are presented by companies in the industry in Düsseldorf at Interpack, the leading trade show for the packaging industry and all of the methods, processes and materials associated with it.

Approximately 2700 exhibitors from 60 countries are expected at Interpack 2014. They will present their new ideas and innovative visions regarding the future of packaging. We will also be there for you!

INVITATION

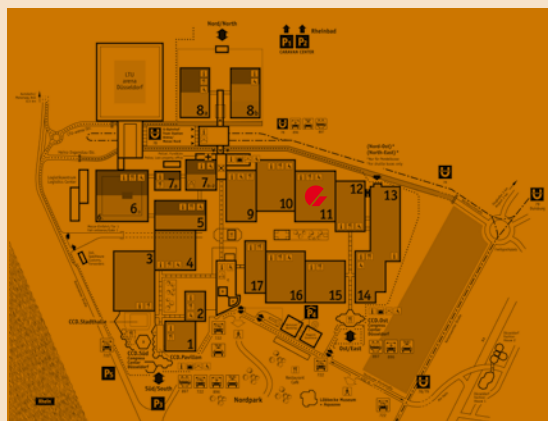

Together with our partner Hettler-Systeme GmbH, Günter Kunststoffmaschinen GmbH will be on location at Interpack 2014. You are cordially invited to stop by our booth at this world-class trade show. Our experts at our stand are available for your convenience from 8-14 May 2014 in Hall 11, stand E31 with interesting ideas and machines you can touch.

We will have machines in operation at our stand so that you will be able to convince yourself of the efficiency and precision of the tools, the easy-to-use controls and the short set-up times. Compare our products with your needs and test our versatility during a conversation with us concerning your custom needs. Our specialists are ready to answer your questions.

Would you like to make an appointment with us? Then please call us at +49 375 30345-0 for an individual presentation of our units.

INTERPACK 2014 DÜSSELDORF 08-14 MAY 2014 STAND 11E31

Quality is not a luxury at Günter. We work hard every day to maintain our high standards so that our customers are satisfied. Comprehensive brochures at our stand provide visitors with an overview of our entire range of products. The experts at our stand would be happy to help you.

K 2013 – REVIEW

FROM REPRESENTATION TO THE SALES FAIR

2013 was shaped by two highlights that were important for the company: the company's 50th anniversary "50 years Günter" and the participation at K 2013 in Düsseldorf, where the polymer and rubber industry presented its new products and visions. For the 14th time in a row, Günter demonstrated to the public that it is a qualitative, high-end and reliable manufacturer of machines and units. The positive vibe at our stand and in the trade show lounge was verified by the high acceptance we have gained with clients and the competition over the past 50 years of Günter machines. We were expected at this trade show, or in other words, it would have been noticeable if we hadn't had been there. This was evident through the customers who specifically sought out the experts at our stand to talk to them in order to close a deal. These kinds of impulse purchases are a very special kind of recognition for our services. The number of new clients, as well, present a positive business forecast when reflecting on the trade show. Overall, K 2013 was a success and fun for all.

1 That special watch in Günter red: a thank you for all our valued customers.

2 A central theme at the joint stand was the company anniversaries of the partner companies, Hettler-Systeme and Günter Kunststoffmaschinen.

3 A stylish ambience was the perfect backdrop for the machines on display. Welcome.

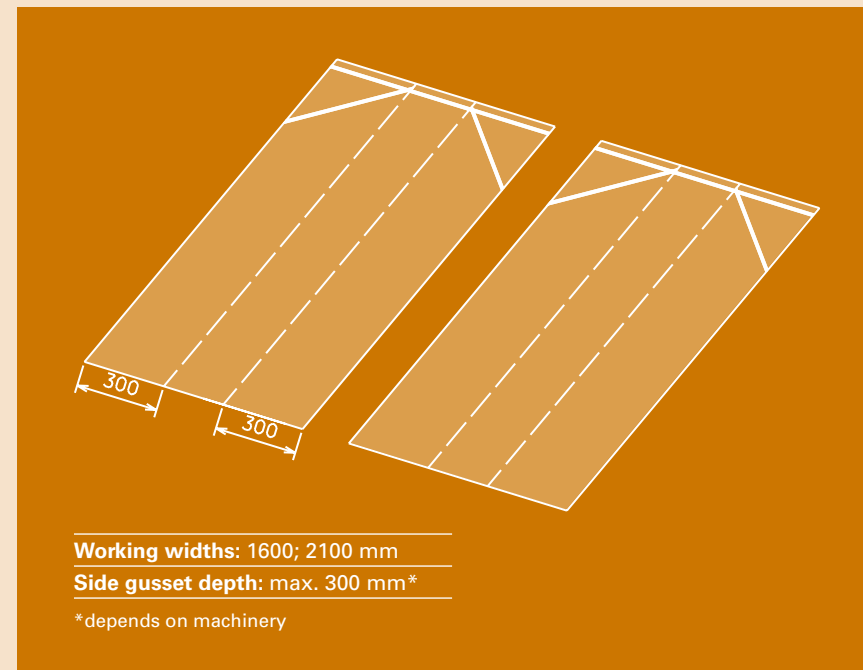

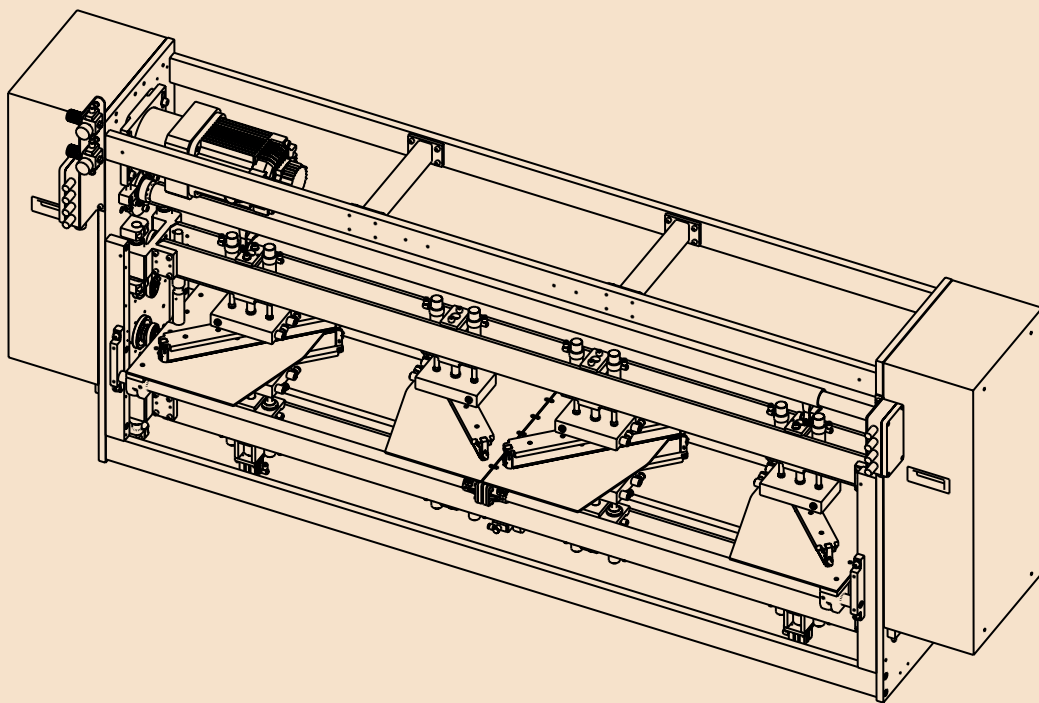

K 2013 – IMPRESSIONS

NEWLY DEVELOPED SQUARE BOTTOM AGGREGATES

NEW AGGREGATE FOR BOTTOM-SEAM BAGS AND SACKS, ONE AND TWO TRACK WELDING SYSTEMS

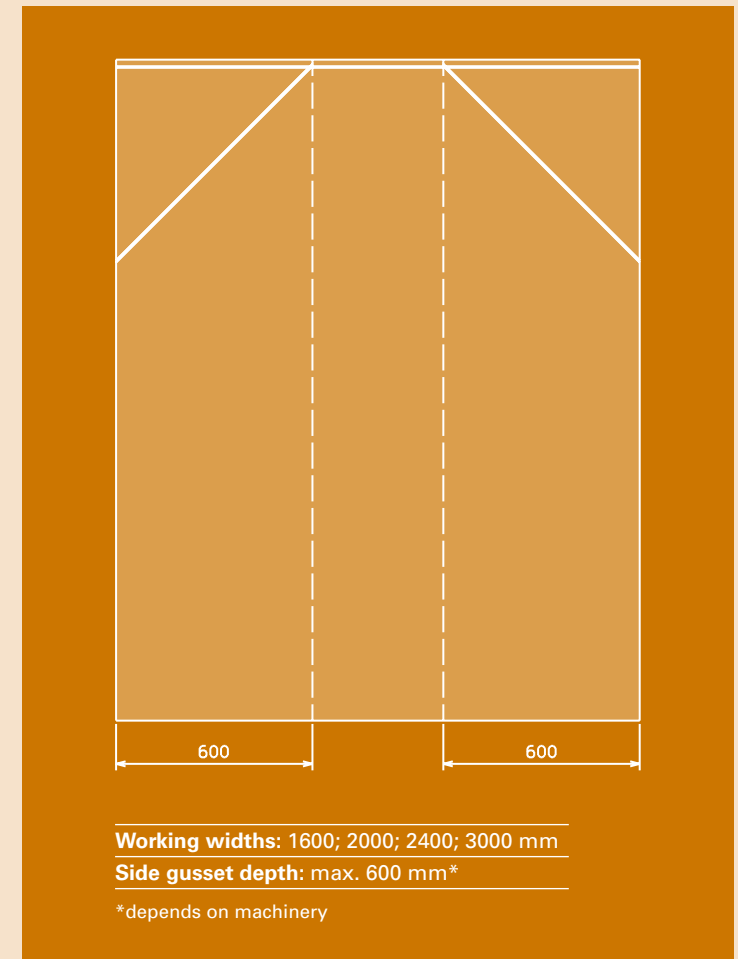

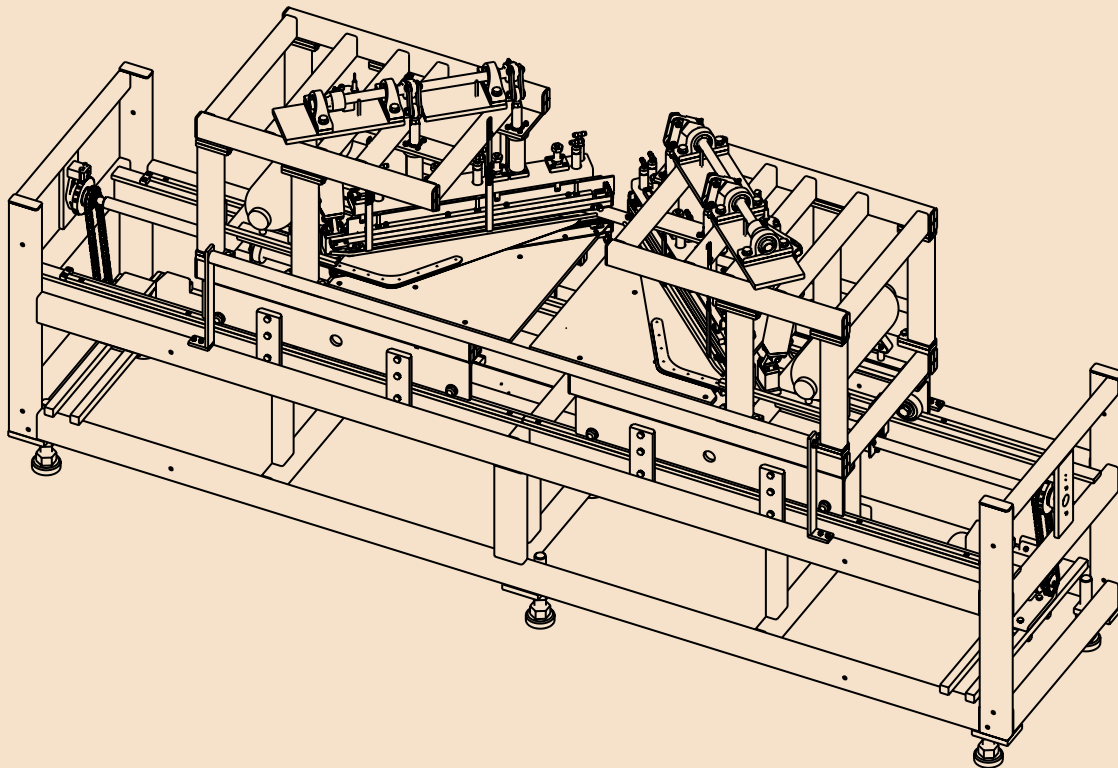

A new aggregate for bottom-seam bags with a square bottom is state of the art with its technological and logistical advantages. Günter presents a solution for sacks and liners with a flat bottom that does not involve the technology used for folding bags; these are virtually impossible to empty completely. The core piece is a completely new developed angular welder aggregate in combination with an additional, separately adjustable servo-drive shaft. The aggregate can be used either for one or two track systems with widths of 1600 mm and 2100 mm. The final product is stored either flat or bundled in stacks.

NEWLY DEVELOPED SQUARE BOTTOM AGGREGATES

NEW AGGREGATE FOR BOTTOM-SEAM BAGS AND SACKS WITH A WORKING WIDTH OF UP TO 3000 MM

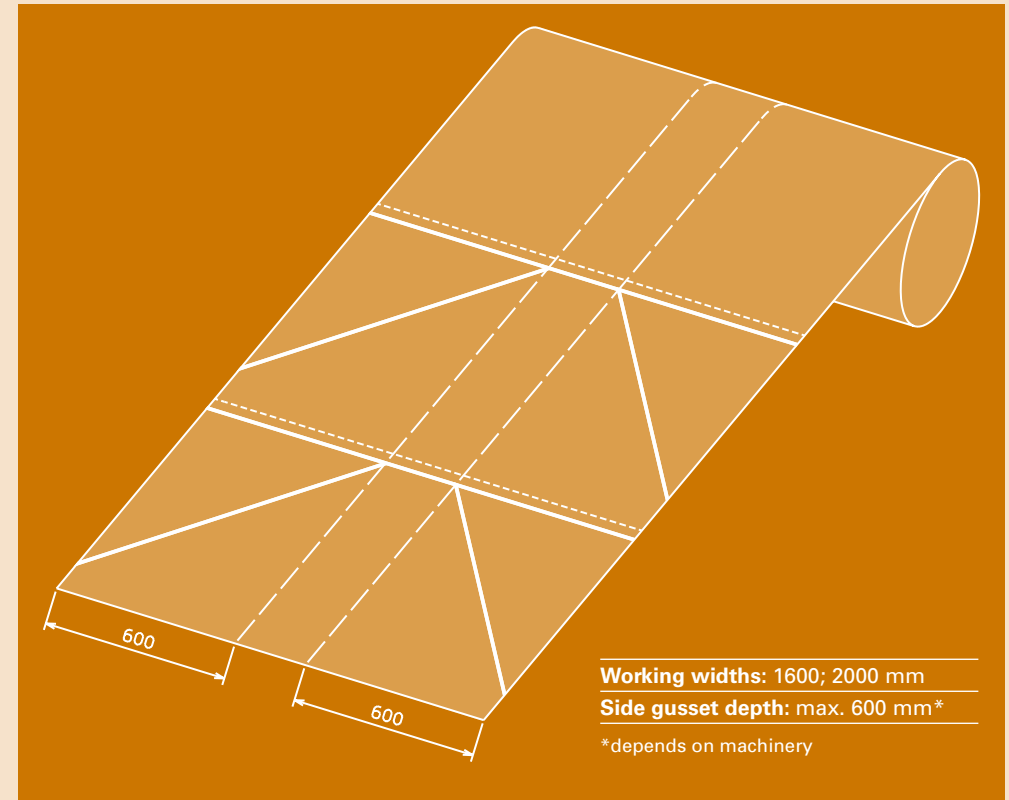

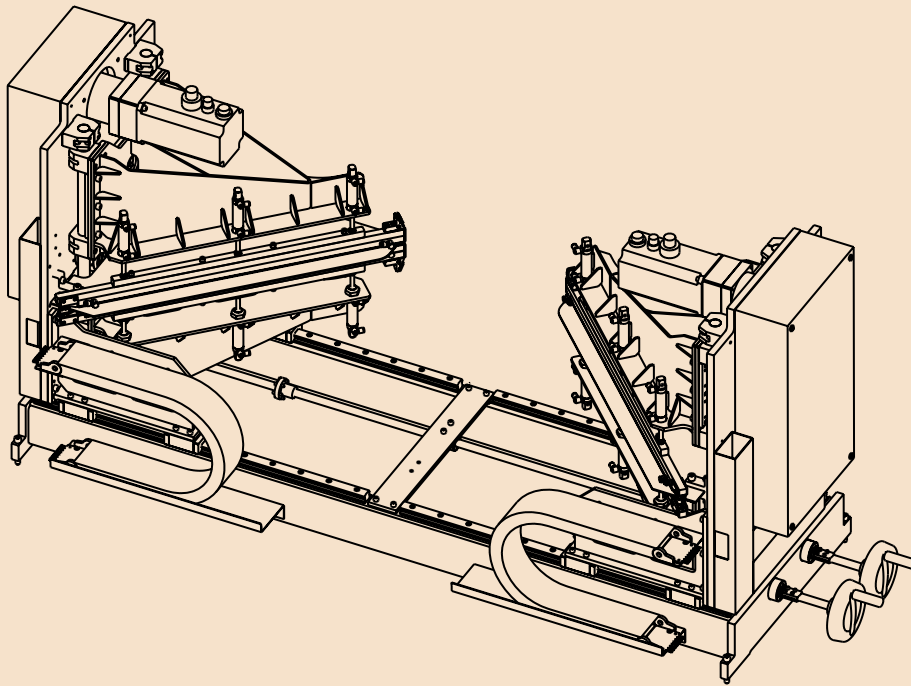

This variation of the new development of the angle welder aggregate with an additional, separately adjustable servo-drive shaft for square bottom sacks, bags and liners has been designed for one track welding systems. After welding, the final product can be stacked flat or bundled. An important feature of the equipment is the particularly large working widths of up to 3000 mm and the large side gusset depth up to a max. of 600 mm in length and width.

NEWLY DEVELOPED SQUARE BOTTOM AGGREGATES

NEW AGGREGATE FOR BOTTOM-SEAM BAGS AND SACKS ON THE ROLL

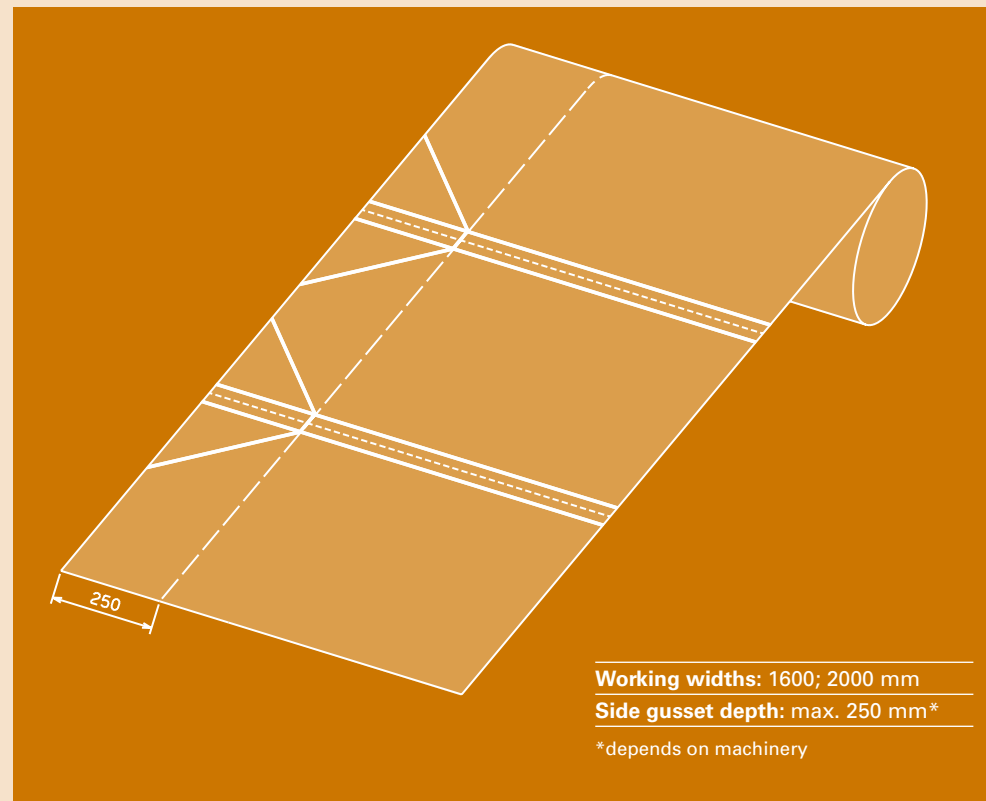

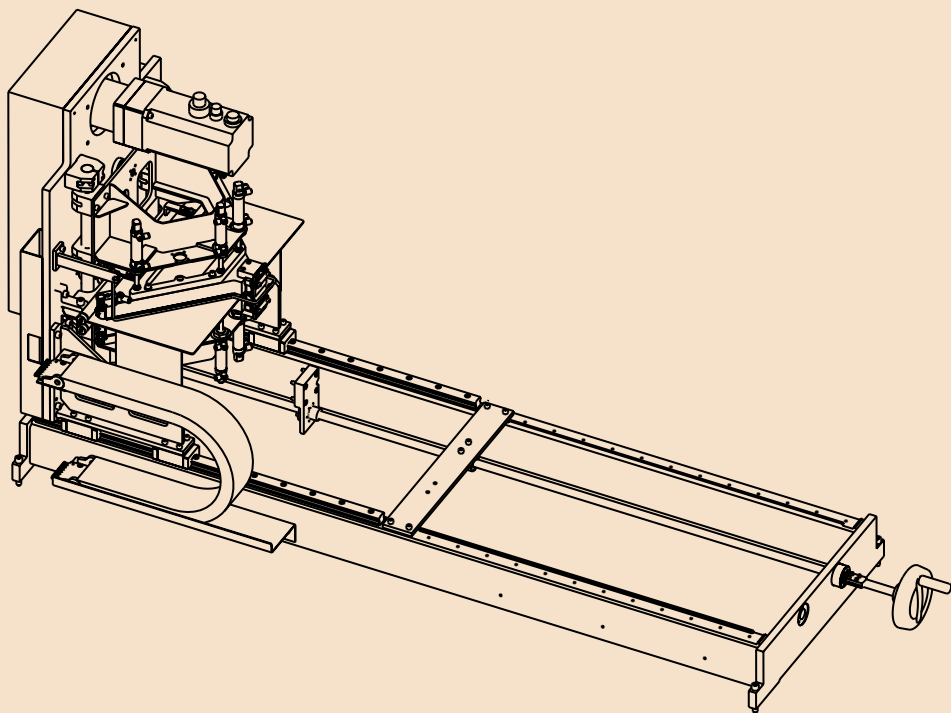

In contrast to the previously described equipment, this angle welder aggregate was developed with an additional, separately adjustable servo-drive shaft in particular for end products that are wound onto rolls after the welding procedure. Here too, the welding tracks are arranged at a 45 degree angle to one another. Material processing is done on a one track system. Depending on the equipment, the side gusset depth can be adjusted in length and width to a max. of 600 mm. The aggregate is offered for working widths of 1600 mm and 2000 mm.

NEWLY DEVELOPED SQUARE BOTTOM AGGREGATES

NEW AGGREGATE FOR BOTTOM-SEAM BAGS AND SACKS WITH WELDED SIDE SEAMS

The one track system of square bottom welding with a side seam from half sleeves also has a completely new developed angle welder aggregate at its disposal. In synergy with the additional, separately adjustable servo-drive shaft, this aggregate solves the problem of folding bags in regards to square bottom products with welded side seams that are manufactured from half sleeves and wound onto rolls after welding. The side gusset depth is adjustable up to a maximum of 250 mm, depending on the machinery.

GÜNTER IN BRIEF

2014 IN-HOUSE TRADE SHOW IN ZWICKAU

You can look forward to our traditional in-house trade show again. Of particular note is the outcome of our attendance at the Interpack trade show in May. This is an excellent opportunity for our valued customers, who were unable to visit our stand in Düsseldorf, to get acquainted with the leading trade show in our industry. As usual, we will have information about our extensive range of products available for trade professions. We look forward to discussing your individual needs and finding a solution together with you. We want you to choose Günter!

... AND NEXT YEAR IN MILAN

After the trade show is before the trade show, and that is why we are sending out the first messages about plast 2015, which will take place in May of next year. Every three years, the polymer and rubber industry meets at this global and high-ranking trade show. The plast trade show has developed into the most eminent collection point for technological solutions as well as into a meeting place for the industry to exchange knowledge. As mechanical engineers, we determine the current state of the art technology in certain industries and it is our aim to build on the great sales we experienced in 2012.

RESEARCH TRENDS

Our developmental engineers use professional trade shows to discover new technology trends and to implement practical ideas for our equipment. Two main factors are definitive: the polymer to be processed and the jointing technology. Which film is to be made into bags, sacks, etc? How thick should the film be? Which additives constitute what new technical features? These and other questions influence the technical maxims. Günter is the market leader in creating high-strength welded seams for different films and it is our objective to remain at the top.

MOURNING FOR HANNELORE GÜNTER

The wife and loyal business partner of the company's founder, Hans-Jürgen Günter, has passed away. Our employees have fond memories of Hannelore Günter, who was an active shareholder and held a managerial position in the company. She kept her husband's ideals alive, campaigning for the company's growth with all her might and acting as both a propeller and pillar on the way to the top. All of us here at Günter will honour the memory of Hannelore Günter.
